MAKE IT HAPPEN

AD319 Changeable Message Signs

The AD319 Changeable Message Signs (CMS) or prism signs allow up to three different messages to be displayed and provides effective and power efficient road signage. Triangular slats or prisms have three sets of graphics applied and then rotate together to change the message. Power is only required when the message changes.

A CMS controller provides the interface between the CMS and the traffic management system and can be controlled remotely or locally. A facility switch allows for manual selection of a sign face. The CMS can be mains powered or have the option of being solar powered. Changeable Message Signs can be manufactured in a variety of sizes and configurations from single to multiple sections. The CMS are extremely reliable and maintenance free with a long life cycle.

Features

- Highly reliable drive mechanism
- Highly visible retro reflective sign face with text and graphics
- Wide viewing angle
- Power efficient
- Maintenance Free
- Aluminium frame construction
- Streams compatible for interfacing to traffic management systems.
- Can be manufactured to a variety of sizes and configurations

Options

- Battery Back-up
- Solar Powered
- 3G/GSM wireless communications
- CMS Frame can be powder coated to RAL color chart
- Interfacing to existing systems and custom protocols.
